

Description

I am looking for a postdoc to work on molecular mechanisms and metabolism of demyelinated axons in neurodegenerative diseases such as peripheral neuropathies, ALS and multiple sclerosis. The project has already started and I expect the postdoc to finish it in due time for the benefit of the publication. A follow-up project is expected to design novel therapeutic approaches for several neurodegenerative diseases. An experience in imaging is advantageous but not a requisite. Montpellier is located on the mediterranean seaside between Italy, Provence, Marseille and Barcelona. It is a lively place for student and young scientists.

Job Information**Closing date:**

2020-02-01

Employment start date:

2020-03-01

Contract length:

24 months

Institution:

INSERM

Department:

Institut des Neurosciences de Montpellier

Contact Information**Nicolas Tricaud**
